

Jaehyun Kim

jaehkim@bu.edu | isthereanycode.github.io

EDUCATION

M.S. in Biomedical Engineering

Boston University

Sep 2026 - Present

Massachusetts, United States

- Full-time graduate student in Biomedical Engineering

Academic English Program

University of Texas at Austin

Aug 2025 - Apr 2026

Texas, United States

- Full-time graduate-level language training focused on academic English skills

B.Eng. in Computer Engineering

Daejeon University

Mar 2020 - Feb 2025

Daejeon, South Korea

- Full-time undergraduate student in Computer Engineering

WORK EXPERIENCE

Graduate Research Assistant

Guenther Speech Neuroscience LAB, Boston University

Sep 2026 - Present

MA, United States

- Advisor: Dr. Frank Guenther

Software Engineer Internship

S-LAB

May 2025 - July 2025

Seoul, South Korea

- Collaborated with developers to review and refactor legacy code for maintainability and reliability
- Debugged and enhanced key application modules using JavaScript and Eclipse, improving response time and reducing errors

Research Internship

Korea Brain Research Institute (KBRI)

Jan 2025 - Feb 2025

Daegu, South Korea

- Implemented deep learning-based facial expression analysis models to examine the relationship between visual features and emotional representation
- Performed immunohistochemistry (IHC) protocols to identify fear-related protein markers and analyze their distribution across brain regions
- Conducted mouse brain sectioning using a cryostat and performed histological staining for neuroanatomical analysis of emotion-related circuits
- Executed patch-clamp electrophysiology experiments to measure neuronal excitability and synaptic responses in mouse brain tissue

Undergraduate Research Assistant

AIONE LAB, Daejeon University

Mar 2023 - Feb 2025

Daejeon, South Korea

- Configured and administered a multi-user GPU server from initial setup to deployment for computational research and model training in the Department of Computer Engineering
- Published YOLO-based Walking Obstacle Risk Notification System for Visually Impaired. Korean Institute of Communications and Information Sciences (KICS)
- Led research on Heart Rate Variability estimation from rPPG signals for Atrial Fibrillation detection using machine learning; preparing manuscript for submission

PUBLICATIONS

Taehyeong Jo, **Jaehyun Kim**, Seunghyun Jeon, "YOLO-based Walking Obstacle Risk Notification System for Visually Impaired." Korean Institute of Communications and Information Sciences (KICS), 2023. Available at: [Link](#)

HONORS & SCHOLARSHIPS

- Dean's Graduate Scholarship** | *Boston University College of Engineering* Feb 2026
- Merit-based tuition scholarship awarded at admission, applicable to the entire duration of the M.S. program
- Tuition Scholarship** | *Daejeon University* 2020 - 2024
- Awarded over multiple semesters for top academic performance in the Department of Computer Engineering
- Honorable Mention** | *East-West Life Science Research Institute* Dec 2023
- Recognized for presenting research achievements at the Daejeon University-affiliated East-West Life Science Research Institute

COMPETITIONS

- Top 1%** | *Kaggle Predicting Smartphone Addiction* Aug 2026 - Sep 2026
- Trained and ensembled gradient boosting models (XGBoost, LightGBM) to predict smartphone addiction probability from behavioral tabular data
- 6th Place** | *Kaggle MuseumSCAT Challenge (CVNH @ ECCV 2026 Workshop)* May 2026 - Aug 2026
- Built OCR and deep learning pipelines to transcribe handwritten and printed specimen labels from the Natural History Museum of Denmark, extracting collection dates and localities
- Top 13%** | *Kaggle The 2026 NeuroGolf Championship* Apr 2026 - Jul 2026
- Designed compute-efficient ONNX networks for ARC-AGI visual reasoning tasks, optimizing architecture under strict inference cost limits
- 9th Place** | *AI CONNECT Biohealth Data Competition* Oct 2023 - Nov 2023
- Developed a deep learning model using panoramic dental radiographs to predict the risk of inferior alveolar nerve injury after wisdom tooth extraction
- Excellence Prize** | *AWS DeepRacer Autonomous Driving Hackathon* Feb 2024
- Trained a deep reinforcement learning model for autonomous driving, achieving top lap-time performance in collaboration with DSC Shared University and AWS Korea

SKILLS

Programming Languages

- Python, C, C++, C#, R, Java, MATLAB

Technical Skills

- Deep Learning & Signal Processing: PyTorch, TensorFlow, MATLAB, OpenCV
- System & Cloud Infrastructure: Linux, AWS, Firebase
- Interactive Systems & Simulation: Unreal Engine, Unity

LANGUAGES

English (Advanced)
Korean (Native speaker)
